A new file format for Eiffel schema definitions

Magnus Bäck

Old state

Each version of each Eiffel event type was self-contained and maintained in its own JSON schema file:

schemas/EiffelArtifactCreatedEvent/1.0.0.json

schemas/EiffelArtifactCreatedEvent/2.0.0.json

schemas/EiffelCompositionDefinedEvent/2.0.0.json

schemas/EiffelCompositionDefinedEvent/3.0.0.json

The documentation of the *latest* version of each event type was maintained in its own Markdown file.

eiffel-vocabulary/EiffelArtifactCreatedEvent.md

eiffel-vocabulary/EiffelCompositionDefinedEvent.md

Problems with our old ways

- > Data duplication.
 - Painful to make change.
 - SDKs become messy.
- > No way to convey the valid links for an event.
- > Schemas and documentation can get out of sync.
- > No convenient way to programmatically obtain e.g. the abbreviation of an event type.

```
type ActivityCanceledV3 struct {  
    Data  ActCV3Data  `json:"data"`  
    Links ActCV3Links `json:"links"`  
    Meta  ActCV3Meta  `json:"meta"`  
}
```

New schema definition files
