EiffelArtifactDeployedEvent (ArtD) – a new event for deployments

Experimental event versions

ArtD v0.1.0 is the first experimental Eiffel event.

Versions prior to v1.0.0 can receive backwards incompatible changes at any time.

```
type ArtifactCreatedV3 struct {
  Meta MetaV1      `json:"meta"`
  Data ArtCV3Data `json:"data"`
  ...
}
```

```
type ArtifactDeployedV0_1_0 struct {
  Meta MetaV1        `json:"meta"`
  Data ArtDV0_1_0Data `json:"data"`
  ...
}
```

TestCaseTriggered's IUT link can now also target SCC, SCS, or ArtC

Previously, the IUT link was only allowed to target CompositionDefined (CD).

That's annoying since it forces an unnecessary CD if you want to link to e.g. a source change.

The expanded link targets removes this unnecessary limitation and aligns TestCaseTriggered with ConfidenceLevelModified's SUBJECT link type.

Eiffel

Add "retriggered" link type to ActivityTriggered

It's not uncommon that an activity is retriggered/retried, i.e. a previous activity is triggered once again with the exact same inputs.

```
┌─────────────────────────┐
│   SourceChangeCreated   │
└─────────────────────────┘
            ▲
            │ CAUSE
            │
┌─────────────────────────┐
│    ActivityTriggered    │
└─────────────────────────┘
            ▲
            │ RETRIGGERED_ACTIVITY_EXECUTION?
            │
┌─────────────────────────┐
│    ActivityTriggered    │
└─────────────────────────┘
```
